ADVANTECH

1. Product Overview

1.1 Product Introduction

ICR-3211 is an industrial cellular router intended for the market in Europe, Middle East and Africa (EMEA) area as well as for the North American market (NAM). The ICR-3211 router is designed for wireless communication in mobile networks that use traditional cellular technologies. The primary purpose of this router is its use in the **Category M1** (Cat M1) and **Narrowband Internet of Things** (NB-IoT cat. NB1) services on the cellular LTE network.

LTE Cat M1 is a new cellular technology specifically designed for the needs of applications targeting the Internet of Things (IoT) or machine-to-machine (M2M) communications. LTE Cat M1 is a low-power wide-area (LPWA) air interface that lets you connect IoT and M2M devices with medium data rate requirements (375 kbps upload and download speeds in half duplex mode).

The standard configuration includes two Ethernet 10/100 ports, serial line **RS232**, **RS485**, one **binary input** and one **binary output**. The device also has two readers for 3 V and 1.8 V **SIM cards**, which are located on the left panel of the router. The router can be provided only in a **metal casing**.

The ICR-3211 router is equipped with a **power backup feature**. It is a short-term power backup (maximum 15 seconds - depending on technology) which is used to complete the running operation or to send the required data immediately after failure of power supply.

Configuration of the router may be done via a password-protected **Web interface**. Web interface provides detailed statistics about the router's activities, signal strength, detailed system log etc. The router supports the creation of VPN tunnels using **IPSec**, **OpenVPN** and **L2TP** to ensure safe communication. **DHCP**, **NAT**, **NAT-T**, **DynDNS**, **NTP**, **VRRP**, control by SMS, backup primary connection and many other functions are supported.

The router provides diagnostic functions which include automatically monitoring the PPP connection, automatic restart in case of connection losses, Low Power Mode and a hardware watchdog that monitors the router status. The user may insert Linux scripts which are started on various actions. It is possible to create up to four different configurations for the same router. These configurations can be switched whenever necessary via Web interface, SMS or binary input status. The router can automatically upgrade its configuration and firmware from your central server. This allows for mass reconfiguration of numerous routers at the same time.

The router also supports additional software like **R-SeeNet** or **WebAccess/VPN** for permanent traffic monitoring of routers.

Examples of possible applications

- mobile office
- fleet management
- security system
- telematic

- telemetric
- remote monitoring
- vending and dispatcher machines

ADVANTECH

1.2 Product Usage Examples

The router is primarily intended for these four basic situations:

I. Access to the Internet from LAN

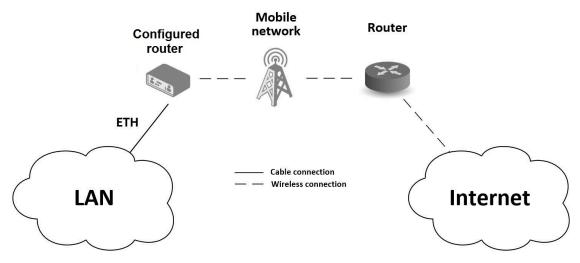

Figure 1: Access to the Internet from LAN

II. Backed up access to the Internet (from LAN)

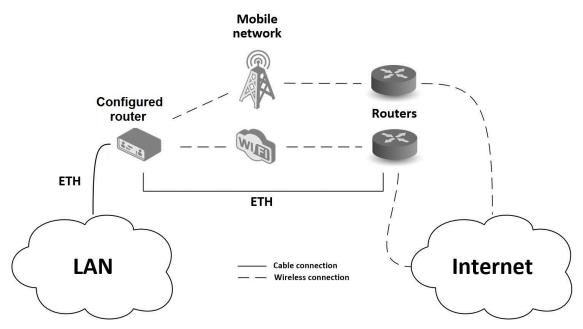

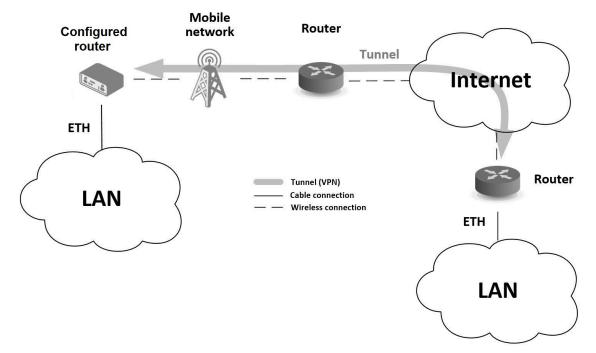

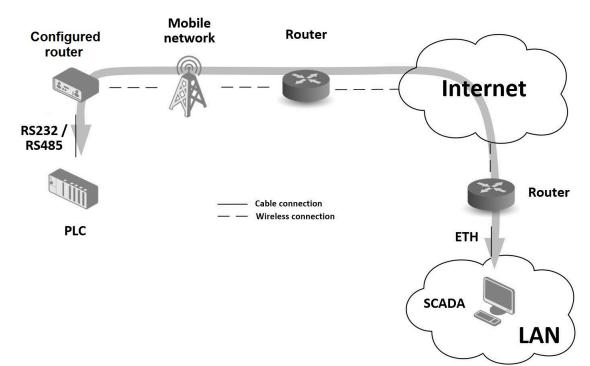

Figure 2: Backed up Access to the Internet

III. Secure networks interconnection or using VPN

IV. Serial Gateway

Figure 4: Serial Gateway

1.3 Hardware Overview

The router case preview is shown in Figure 5. A short description of hardware parts of the router is listed in Table 1, including the links to the chapters with a detailed description.

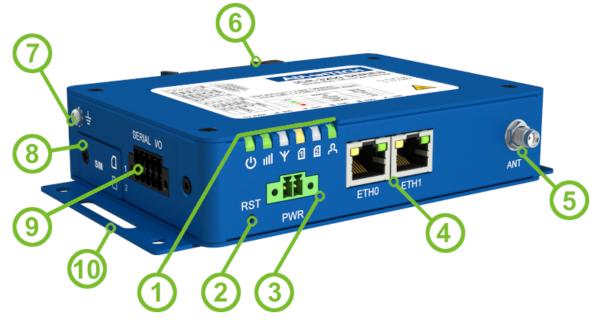

Figure 5: Hardware Overview of the Router

| # | Item/Captic | Туре | Description |
|----|-----------------|--------------------|--|
| 1 | LEDs | - | Status LED indication; see Chapter 2.7. |
| 2 | RST | - | Button to reboot the router or to restore the default configuration; see Chapter 2.9. |
| 3 | PWR | 2-pin | Power supply 2-pin terminal socket; see Chapter 2.4. |
| 4 | ETH0, ETH1 | RJ45 | 100 MB Ethernet connection for the firts and second LAN; see Chapter 2.3. |
| 5 | ANT | SMA | Connector for the main antenna of the cellular module; see Chapter 2.2 and Chapter 4.4 for cellular module parameters. |

1.5 Order Codes

Order codes overview is shown in the table below.

| Product type | Product name | Order code | Features – interfaces | | |
|--------------|--------------|------------|--|--|--|
| ICR-3200 | ICR-3211 | ICR-3211B | LTE module for NAM, 2x ETH, 1x BI, 1x BO, 1x RS232, 1x RS485, 2x SIM reader | | |
| | | | | | |

Table 3: Order Codes Overview

1.6 Package Contents

The standard set of router includes items listed in the following table:

| ltem# | Description | Figure | Q'ty |
|-------|---|--------|-------|
| 1 | ICR-3211 router | | 1 pcs |
| 2 | DIN holder (screwed on the router) | * | 1 pcs |
| 3 | Wing for wall mounting (screwed on the router) | | 2 pcs |
| 4 | 2-pin terminal block for power supply (deployed on the router) | | 1 pcs |
| 5 | 10-pin terminal block for RS232, RS485 and I/O (deployed on the router) | | 1 pcs |
| 6 | Quick Start Guide Leaflet | | 1 pcs |

Table 4: Contents of package

1.7 Product Dimensions

For the dimensions of the product in metal and plastic boxes see the figures below. Note that all sizes are measured in millimeters.

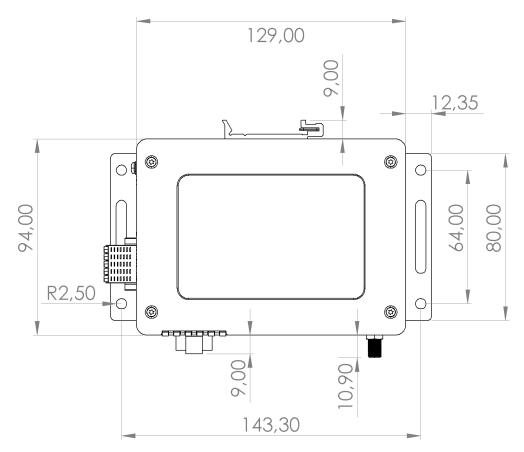

Figure 7: Basic dimensions of the router box

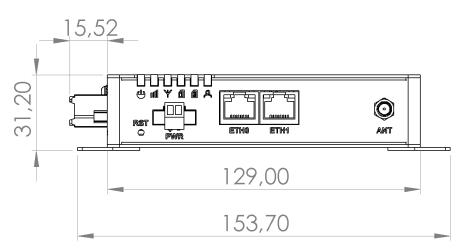

Figure 8: Basic dimensions of the router box

1.8 Mounting Recommendations

The router can be placed:

- on a flat surface,
- on a wall (or another surface) using the side wings,
- on a DIN rail EN 60715 with the included metal DIN rail clip.

For most applications with a built-in router within a switchboard, it is possible to recognize two kinds of environments:

- A non-public, industry environment of low voltage with high interference,
- a public environment of low voltage and without high interference.

For both of these environments, it is possible to mount the router to a switchboard, after which there is no need to have examination immunity or issues in connection with EMC according to EN 61439-1:2011.

!

In compliance with the EN 61439-1:2011 specification, it is necessary to observe the following assembly instructions for a router attached to a switchboard:

- For whip antennas it is recommended to observe a minimum distance of 6 cm from cables and metal surfaces on every side in order to avoid interference. When using an external antenna separate from the switchboard it is necessary to fit a lightning conductor.
- When mounting a router on sheet-steel we recommend using a cable antenna.
- For all cables, we recommend to bind the bunch, and for this we recommend:
 - The length of the bunch (the combination of power supply and data cables) should be a maximum 1.5 m. If the length of data cables exceeds 1.5 m or if the cable is leading towards the switchboard, we recommend installing surge protectors.
 - Data cables must not have a reticular tension of \sim 230 V/50 Hz or \sim 120 V/60 Hz.
- Sufficient space must be left between each connector for the handling of cables,
- To ensure the correct functioning of the router we recommend the use of an earthbonding distribution frame for the grounding of the power supply of the router, data cables and antenna within the switchboard.

ADVANTECH

i

!

1.9 Wall Mounting

The wall mounting clip is supplied with the router as standard accessories.

The router can be screwed to a wall (or another surface) using the wall mounting clips. Two wall mounting clips are assembled to the router during the production and need to be roteted as shown of Figure 9.

There are two wholes on the clip with a diameter of 5 millimeters. For detailed information about the mounting dimensions see Chapter 1.7.

When mounting the wall mounting clip, tighten the screws with max. torque of 0.4 Nm.

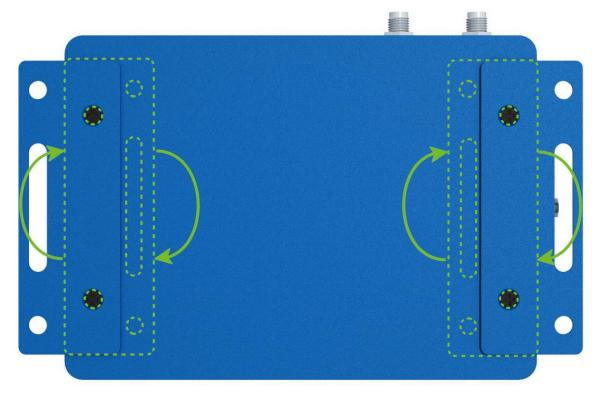

Figure 9: Rotated Wall Mounting Clips

1.10 DIN Rail Mounting

i

!

The DIN rail clip is suitable for a DIN rail according to EN 60715 standards.

When mounting the DIN rail clip, tighten the screws with max. torque of 0.4 Nm.

To remove the router from the DIN rail it is necessary to lightly push down the router so that the bottom part of the DIN rail clip hitched to the DIN rail get out of this rail and then fold out the bottom part of the router away from the DIN rail.

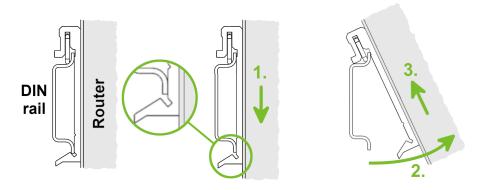

Figure 10: Removing from the DIN rail

1.11 Product Label

An example of the product label, with all the information printed on it, is in the figure below.

Figure 11: Label Example

2. Hardware Functionality

See Chapter 1.3 for the product hardware overwiew. Table 1 lists a short description of the hardware, including the links to the chapters with a detailed description.

2.1 SIM Card Slots

Slots for two SIM cards are located on the router under a metal cover. If you intend to use this device to communicate over a cellular network, please place an activated data-provisioned SIM card into the SIM card reader.

You can install two SIM cards simultaneously to utilize the switching feature. The SIM cards may have different APNs (Access Point Names) adjusted. The SIM card changing procedure is described below. Enter the PIN in the router's web interface if the PIN is required for the SIM (*Administration -> Unlock SIM Card*).

Type of SIM card: Mini SIM (2FF) 25.0 x 15.0 x 0.76 mm.

Inserting the SIM card:

A

- Always disconnect the router from the power supply before handling the SIM card.
- Unscrew two screws on the SIM card cover and remove the cover.
- To remove an inserted SIM card, use the flat end of a spudger, or your fingernail, press the SIM card slightly into its slot until you hear a click. After hearing this click, release the card, and it will pop out of its slot.
- To insert a SIM card push card into the slot until it clicks into place.
- Place back the cover and fix it by two screws.

Figure 12: SIM Cards Insertion

For *Verizon Wireless* network, SMS messages will be transmitted successfully only if both of the end devices are equipped with an LTE Cat-M cellular module.

2.2 Antenna

!

1

Connect cellular antenna to the router to main (ANT) SMA connector.

Only run the router with a cellular antenna connected to the main antenna connector, as the energy from the transmission is effectively reflected by the open end and can damage the equipment.

Recommended tightening moment for screwing the antenna to the SMA connectors is 0.9 Nm.

2.3 Ethernet Interfaces

The panel socket of RJ45 is used for Ethernet interface. The pinout of the socket is shown in Figure 13 and described in Table 5.

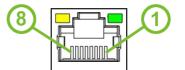

Figure 13: Ethernet Connector Pinout

| Pin | Signal mark | Description |
|-----|-------------|--------------------------------|
| 1 | Tx+ | Transmit Data+ (positive pole) |
| 2 | Tx- | Transmit Data- (negative pole) |
| 3 | Rx+ | Receive Data+ (positive pole) |
| 4 | — | - |
| 5 | — | - |
| 6 | Rx- | Receive Data- (negative pole) |
| 7 | — | - |
| 8 | — | - |

Table 5: Ethernet Connector Pinout Description

i The isolation barrier of the Ethernet ports against the ground is 1500 V.

2.4 Power Supply

Terminal block 3.5 mm.

| Pin number | Signal mark | Description |
|------------|-------------|---|
| 1 | VCC(+) | Positive pole of DC supply voltage (+9 to +36 V DC) |
| 2 | GND(-) | Negative pole of DC supply voltage |

Table 6: Connection of power connector

Figure 14: Power connector

Power supply for router is required between +9 V to +36 V DC supply. Protection against reversed polarity without signaling is built into the router.

If the router is grounded, using the grounding screw, there is no protection against the reversed polarity. The negative pole of the DC power supply must be at the same voltage reference as the grounding screw. If not, a voltage difference between these two points might damage the router, and only an authorized service center can fix it.

For correct operation it is necessary that the power source is able to supply a peak current of 1.2 A.

Unit has to be supplied by a power supply specified as a Limited Power Source (LPS) or CEC/NEC Class 2 source of supply.

Circuit example:

!

Figure 15: Connection of power supply

All metal parts, including the box, are connected together with the negative pole of power supply (common pole). To ground the router can be used the grounding screw located on the left panel.

!

2.5 Low Power Mode

In applications requiring low power consumption (such as solar power - not 7/24 mode) is strictly recommended to use LPM mode prior to powering down the entire router.

LPM (Low Power Mode) is a router mode where the router is in sleep mode with minimal power consumption; see Chapter 4.1 for the LPM consumption. The router can be woken up from this mode by a signal applied to the BIN0 input or after a predetermined period of time. Putting the router into LPM mode can be done using the lpm command, see Commands and Scripts application note for more details.

2.6 Serial Interfaces and I/O Port

AD\ANTECH

1

The RS232 and RS485 serial interfaces together with the I/O interface are physically connected to the 10-pin panel socket. All three interfaces are not isolated from the router. The pinout of this conector is described in the tables below.

Figure 16: Serial + I/O connector

| Pin | Signal mark | Description |
|-----|-------------|-------------|
| 1 | B (+) | IN/OUT |
| 2 | A (-) | IN/OUT |
| 3 | GND | GROUND |

Table 7: Connection of RS485

We recommend connecting a termination resistor outside the router. Without termination resistors, signal reflections off the unterminated end of the cable can cause data corruption. Termination resistors also reduce electrical noise sensitivity due to the lower impedance.

| Pin | Signal mark | Description |
|-----|-------------|-------------|
| 4 | BIN | BINARY IN |
| 5 | BOUT | BINARY OUT |

Table 8: Connection of I/O

| Pin | Signal mark | Description |
|-----|-------------|-------------|
| 6 | RXD | IN |
| 7 | CTS | IN |
| 8 | GND | GROUND |
| 9 | RTS | OUT |
| 10 | TXD | OUT |

Table 9: Connection of RS232

The I/O user interface is designed for binary input processing and binary output control. By default, the binary output is open, so it is not grounded. The maximum binary output load is 36 V at 500 mA. The constant current supplied by the binary input is 3 mA.

17

The functional scheme of connection for the binary input and binary output is drawn on the picture below.

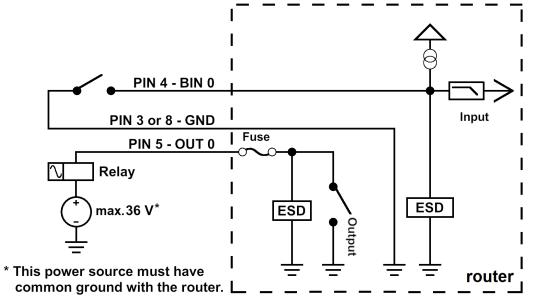

Figure 17: Functional scheme of the binary interface

2.7 LED Status Indication

There are six LED indicators on the front panel to provide router status information. Each ETH port has two additional LEDs that provide information about the port status.

| | Caption | Color | State | Description |
|--------|--------------|--|---|--|
| С С | PWR | Green Green Green | On Blinking Fast blinking | The router is booting up. The router booted up and is ready. The router firmware is being updated. |
| ull | SIG | Green Orange Red | On On On | Good cellular signal. Fair cellular signal. Poor cellular signal. |
| Ψ | DAT | Green | Blinking | Cellular communication is in progress. |
| 1 | SIM1 | Green Green Orange Red Red | Blinking On On On Fast blinking | SIM1 is active and waiting for the data connection. The active SIM uses 4G technology. The active SIM uses 3G technology. The active SIM uses 2G technology. A SIM1 issue (missing card or PIN not entered). |
| 2 | SIM2 | Green Green Orange Red Red | Blinking On On On Fast blinking | SIM2 is active and waiting for the data connection. The active SIM uses 4G technology. The active SIM uses 3G technology. The active SIM uses 2G technology. A SIM2 issue (missing card or PIN not entered). |
| ጺ | USR | Green | — | The function of this LED is user-defined. |
| | ETH0 ETH1 | Green Green | On Off | Selected 100 Mbps bit rate. Selected 10 Mbps bit rate. |
| | ETH0 ETH1 | Yellow Yellow Yellow | On Blinking Off | The network cable is connected. Data transmission. The network cable is not connected. |

Table 10: Status indication

2.8 Power Backup Feature

This router is equipped with a power backup feature. It is a short-term power backup, which is used to complete the running operation or to send the required data immediately after the failure of the power supply. The maximal operation time for the power outage depends on actual cellular technology used and is up to 15 seconds.

The easiest way how to handle this state is to write a custom script and store it in *Configuration -> Scripts -> Startup*. Below you can see scripts for three different actions of sending an SMS, sending an e-mail and sending an SNMP trap.

Send an SMS

This script is going to send an SMS message for when the power supply will reach the defined threshold voltage.

Following items should be revised in the script:

- destined phone number,
- threshold for minimal power supply voltage,
- content of the SMS message, (\$VOLTAGE variable stands for the value of the actual power supply voltage).

```
# This script monitors the supply voltage and will send an SMS if below the defined
threshold.
```

PHONE=+xx123456... # Set the destined phone number THRESHOLD=8 # Set the threshold voltage level SENT=0 while true; do VOLTAGE='status sys | awk '/Voltage/ { print \$4 }'' if [\$THRESHOLD -1t \${VOLTAGE%.*}]; then SENT=0 elif [\$SENT -eq 0]; then # Sending SMS message sms \$PHONE "Power supply below defined threshold! Actual voltage is \$VOLTAGE V." SENT=1 fi sleep 1 done

Send an E-mail

This script is going to send an e-mail message for when the power supply will reach the defined threshold voltage. Firts, ensure the SNMP credentials are configured in the *Configuration -> Services -> SMTP* configuration page.

Following items should be revised in the script:

- · destined e-mail address,
- threshold for minimal power supply voltage,
- subject and body of the e-mail (\$VOLTAGE variable stands for the value of the actual power supply voltage).

```
# This script monitors the supply voltage and will send an e-mail if below the
    treshold.
EMAIL_TO="xxx@organization.com" # Set the destined e-mail address
THRESHOLD=8
                               # Set the threshold voltage level
SENT=0
while true; do
 VOLTAGE='status sys | awk '/Voltage/ { print $4 }''
 if [ $THRESHOLD -lt ${VOLTAGE%.*} ]; then
   SENT=0
 elif [ $SENT -eq 0 ]; then
  # Sending the e-mail with subject (-s) and body (-m).
  email -t $EMAIL_TO -s "Power supply outage..." -m "Actual voltage is $VOLTAGE V."
   SENT=1
 fi
  sleep 1
done
```

Send an SNMP Trap

This script is going to send an SNMP trap for when the power supply will reach the defined threshold voltage.

Following items should be revised in the script:

- SNMP destinated IP address,
- OID of the SNMP trap,
- threshold for minimal power supply voltage.
- # This script monitors the supply voltage and will send an SNMP trap if below the treshold.

```
SNMP_IP=192.168.1.1 # Set SNMP destinated IP address
OID="1.2.3.4.5.6.7.8" # Set the OID
THRESHOLD=8 # Set the threshold voltage level
```

```
SENT=0
```

```
while true; do
VOLTAGE='status sys | awk '/Voltage/ { print $4 }''
if [ $THRESHOLD -1t ${VOLTAGE%.*} ]; then
   SENT=0
elif [ $SENT -eq 0 ]; then
   # Sending the SNMP trap
   snmptrap -c public $SNMP_IP $OID s $VOLTAGE
   SENT=1
fi
   sleep 1
done
```

!

(i)

2.9 Reset Functions

Consider creating a router configuration backup before performing the router's factory reset.

The *RST* button can be used in three different scenarios:

- **Reset**: Hold the *RST* button for **less than 4 seconds**; the router will reboot, applying its customized configuration. The router reset can be initiated by clicking the *Reboot* menu item in the router web GUI.
- Factory Reset: To restore the default factory configuration of the router, press and hold the *RST* button for more than 4 seconds. After that, the *PWR* LED turns off and on again. We recommend holding the *RST* button for 1 second after turning on the PWR LED.
- Emergency Factory Reset: If the router cannot boot up due to the incorrect configuration, turn off the router (disconnect the power supply). Then, push and hold the *RST* button, turn on the router and hold the *RST* button for at least 10 seconds. The router configuration will be set to the default one.

It is necessary to use a narrow screwdriver or any other small tool to press the RST button.

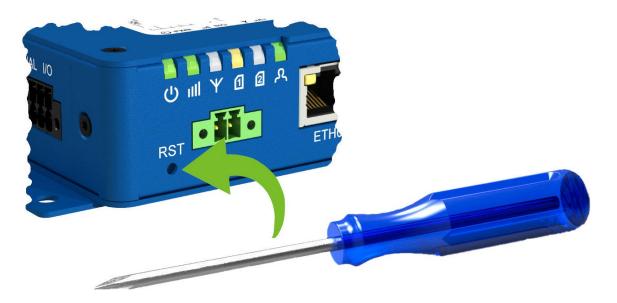

Figure 18: Resetting the Router

ADVANTECH

(]

1

3. First Use

3.1 Accessories Connection

Before putting the router into operation, it is necessary to connect all the components required to run your applications; see Chapter 1.3 for the hardware overview. Remember to insert a SIM card for the cellular connection; see Chapter 2.1.

Do not run the router without antenna connected to the main antenna connector as the energy from the transmission is effectively reflected by the open end and can damage the equipment.

3.2 Router Configuration

Initial router configuration can be made via a web browser on your PC. Here you can perform router monitoring, configuration, and administration.

Connect the power supply to the router, see Chapter 2.4, and the router will boot up. By default, the router will automatically log on to the default APN of the inserted SIM card. Configure your PC to get the IP settings automatically from the network. Connect the network card of your PC to the default router LAN interface, Ethernet port ETH0, and the DHCP server will assign an IP address to your PC.

To get the router web interface, enter the https://192.168.1.1 address in a web browser. Please note that usage of the HTTPS protocol for secure communication over the network is required.

There is just the root **user account** created on the router by default. See the **product label** on the router for its **default password**¹. Log in to the web interface with the root user and his password. If logged in successfully, the user will have access to the router web interface, see Figure 19. See the router configuration manual [1] for a detailed description and examples of the router configuration.

After logging on to the device for the first time, we strongly recommend changing the default password due to security reasons.

For security reasons, we recommend regularly updating the router's firmware to the latest version. Downgrading the firmware to an older version than the production version or uploading firmware intended for a different device may cause the device's malfunction.

All routers have the *WebAccess/DMP* client pre-installed by default. The activated client periodically uploads router identifiers and configuration to the *WebAccess/DMP* server. See the configuration manual [1], chapter *Basic Information -> WebAccess/DMP Configuration*, for more information.

¹Use the password root if the router's label does not contain a unique password.

| Supply voltage | | 9 to 36 V DC | |
| Battery for RTC | | CR1225 | |
| Consumption @ 9 V | Idle Average Peak LPM mode | 2.3 W 3.8 W 5.4 W 100 mW | |
| Dimensions of device | | 31,2 \times 94 \times 129 mm (1.23" \times 3.7" \times 5.08") | |
| DIN rail clip dimensions | | DIN 35 mm, EN 60715 | |
| Weight | Metal box | 480 g (1.05 lbs) | |
| Antenna connectors | | 1 \times SMA for LTE – 50 Ω | |
| User interface | 2× ETH SERIAL I/O | Ethernet RJ-45 (10/100 Mbit/s) 10-pin panel socket Terminal Block (for RS232, RS485 and I/O) | |

Table 11: Basic parameters

4.2 Standards and Regulations

The router complies with the following standards and regulations:

| Standards and regulations | | |
|---------------------------|--|--|
| Radio | PTCRB, EN 301 511, EN 301 908-1, EN 301 908-13, EN 303 413 | |
| EMC | EN 301 489-1, EN 301 489-19, EN 301 489-52, EN 61000-6-2, EN 61000-6-4, FCC 15.107 Class B, FCC 15.109 Class B, IC | |
| Safety | IEC 62368-1:2014 | |
| Transportation | EN 45545-2 | |
| Railway | EN 50155 (A1, OT4, ST1, H1, Cat 1 Class B, S3, C2, L4, PD1, K2, PC2) | |
| Carrier approvals | Verizon, AT&T | |
| National | FCC, IC, CE, UKCA compliant | |
| Environmental | REACH, RoHS3 and WEEE compliant | |
| | Table 12: Standards and regulations | |

4.3 Type Tests and Environmental Conditions

| Phenomena | Test | Description | Test levels |
|-------------------|-------------------------------------|-------------------------|--------------------------------------|
| ESD | EN 61000-4-2 | Enclosure contact | \pm 6 kV (crit. A) |
| | | Enclosure air | \pm 8 kV (crit. A) |
| RF field AM | EN 61000-4-3 | Enclosure | 20 V/m (crit. A) |
| modulated | | | (80 – 10000 MHz) 10 V/m (crit. A) |
| | | | (1 - 6 GHz) |
| Fast transient | EN 61000-4-4 | Signal ports | \pm 1 kV (crit. A) |
| i dot tranolonit | | Power ports | $\pm 2 \text{ kV}$ (crit. A) |
| | | Ethernet ports | \pm 1 kV (crit. A) |
| Surge | EN 61000-4-5 | Ethernet ports | \pm 1 kV (crit. A), shielded cab. |
| | | Power ports | \pm 2 kV (crit. A) |
| RF conducted | EN 61000-4-6 | All ports | 10 V/m (crit. A) |
| | | | (0,15 – 80 MHz) |
| Radiated emission | EN 55032 | Enclosure | Class B |
| Conducted | EN 55032 | DC power ports | Class B |
| emission | | Ethernet ports | Class B |
| Dry heat | EN 60068-2-2 | +75 °C*, 40 % rel. hu | ımidity |
| | MIL-STD-810G SAE J1455 | | |
| Cold | EN 60068-2-1 | -40 °C* | |
| Cold | MIL-STD-810G | -40 °C | |
| | SAE J1455 | | |
| Damp heat | EN 60068-2-78 | 95% rel. humidity (+4 | 0°C) |
| | MIL-STD-810G | | , |
| | SAE J1455 | | |
| Vibration | EN 60068-2-64 ed. 2 | Vibration spectrum | Category 1 (3 axis, 8 hours |
| | MIL-STD-810G | A.3 (rolling stock) | per axis) |
| | SAE J1455 | | |
| Shock | EN 60068-2-27 ed. 2 MIL-STD-810G | half-sine, 50 g peak, 1 | 1 ms |
| | SAE J1455 | | |
| | 0,1201400 | | |

Table 13: Type tests and environmental conditions

4.4 Parameters of Cellular Module

| Technical parameters of cellular module | | | |
|---|--|--|--|
| LTE parameters | LTE: Cat M1/NB-IoT (cat. NB1) | | |
| | FDD frequencies: B12, B13, B28 (700 MHz), B20 (800 MHz), | | |
| | B5, B18, B19, B26 (850 MHz), B8 (900 MHz), B4 (1700 MHz), B3 | | |
| | (1800 MHz), B2 (1900 MHz), B1 (2100 MHz) | | |
| | TDD frequencies: B39 (1900 MHz) | | |
| | LTE bit rates: 375 Kbps (DL) / 375 Kbps (UL) | | |
| EDGE parameters | Supported frequencies: 850 MHz, 900 MHz, 1800 MHz, 1900 MHz | | |
| | EDGE bit rates: 296 Kbps (DL) / 236.8 Kbps (UL) | | |
| GPRS parameters | Supported frequencies: 850 MHz, 900 MHz, 1800 MHz, 1900 MHz | | |
| | GPRS bit rates: 107 Kbps (DL) / 85.6 Kbps (UL) | | |

Table 14: Technical parameters of cellular module

Antenna Requirements

- VSWR: <2:1 (Antenna input impedance response as function of frequency. This shows the antenna resonances and its bandwidth).
- SMA: 50 Ω

4.5 Other Technical Parameters

| Other technical parameters | | |
|----------------------------|--|--|
| CPU | Cortex A8, 1 GHz 2 DMIPS per MHz | |
| Flash memory | Available memory space 1862 MB • 2x 256 MB – FW | |
| | • 512 MB – User data storage | |
| | 838 MB – Space for Router Apps | |
| RAM | 512 MB | |
| - | | |

Table 15: Other technical parameters

Appendix A: Troubleshooting

If you cannot connect to the router from your PC, your network card may be configured in such a way that it is not possible to connect to the router. Take one or more of the following steps in order to solve the problem:

- Make sure your PC's network card is configured to obtain the IP address form the DHCP server (by default the DHCP server is running in the router).
- Connect the router to the PC via Switch.
- Connect the router to the PC, start the router first and then start the PC after the router's initialization.

Ethernet connection fails or is not establishing.

• It is possible to turn auto negotiation off and set a rate and duplex manually on the Ethernet interface of the router. Available on "LAN Configuration" page in the router.

Mobile WAN connection fails.

- Check the signal power ("Mobile WAN status" page). If the signal power is weak, you will have to use a better antenna. If the neighbouring cells have a similar signal strength, you will need to use a directional antenna. For proper operation, the signal levels have to be good.
- Try to enable automatic ping from the router, which will check the connection when there are no data running and in the case of a failed ping, restart the connection. This can be done on the "Mobile WAN Configuration" page in the router in the "Check connection" section. "Enable + bind" option is to ensure the ping goes always through Mobile WAN network interface.

Mobile WAN connection cannot be established.

- Check the "Mobile WAN Configuration" APN, name, password and IP address (all can be blank).
- Try to enter the SIM card PIN verify that the SIM card has the PIN code entered. Available on "Unlock SIM Card" page in the "Administration" section.
- In a private APN it is not recommended to get the DNS settings from operator (on "Mobile WAN" page)
- Go to "System Log" page in "Status" section and observe where the error occurs.

I cannot connect from the Internet to the device behind the router. I have NAT enabled.

• The device's gateway has to be configured so it points to the router.

I can't access my Web server placed behind the router over NAT.

• The remote HTTP access to the router has to be disabled on "NAT Configuration" page in the router. Also enable "Send all remaining incoming packets to default server" feature and fill in the IP address of your Web server. On the Web server, the default gateway has to be the IP address of the router.

DynDNS doesn't work.

- With private APN this will not work.
- If the same IP address is recorded in your canonic name as a dynamically assigned address, it means that the operator is using NAT or a firewall.
- You can verify NAT using ping to your server with static address and then compare with router's IP address.
- You can verify a Firewall by accessing remotely to the router's Web interface.
- The operator may not provide the address of DNS server and without DNS server's address it is impossible to connect to the dyndns.org server. The following messages will be shown in the System Log:
 - DynDNS daemon started
 - Error resolving hostname: no such file or directory
 - Connect to DynDNS server failed

L2TP or IPSec isn't establishing.

• Check the "System Log" page for error messages.

IPSec tunnel establishes but the communication does not run.

• Probably there are bad routing rules defined in the connected devices, or the default gateway.

I switched the router to offline mode by SMS message, but the router is in online mode after reboot.

• SMS messages do not change the router configuration. They remain in effect only until the router is rebooted.

E Serial communication is not working.

• Verify that the router model supports serial communications. Also verify the serial communication settings. To do so, open the router's configuration menu via the web browser, select the appropriate "Expansion Port" from "Configuration" part of the menu and verify the settings.

Is the router Cisco compatible? Can I use the Cisco configuration?

• No, the Firmware in the router (Conel OS) is based on Linux with BusyBox. Thus the Cisco configuration cannot be used. But network connections are defined by standards so connecting the router to the Cisco or other networking devices is possible and will be compatible.

FTP or SFTP does not work

• FTP will work on v2 routers only. You can use SFTP on all routers to transfer files to/from the router. If having troubles with FTP on v2 routers, make sure you have FTP enabled: "Configuration" section, "Services", "FTP". Then you can connect with any client on port 21 with name and password same as for the Web interface. If having troubles with SFTP, make sure you have SSH enabled: "Configuration" section, "Services", "SSH". Then you can connect with any client on port 22 with name and password same as for the Web interface.

M How can I connect to the router's command line? (SSH, Telnet)

 You can use SSH on all routers or Telnet on v2 routers only. SSH is enabled by default, but you can verify in Web interface in "Configuration" section, "Services", "SSH". Then connect with any SSH client on port 22 of the router. User and password is the same as for the Web interface. Telnet on v2 routers can be enabled here: "Configuration" section, "Services", "Telnet".

Appendix C: Regulatory & Safety Information

Safety Notices

/!\

Please, observe the following instructions:

- The router must be used in compliance with all applicable international and national laws and in compliance with any special restrictions regulating the utilization of the router in prescribed applications and environments.
- To prevent possible injury and damage to appliances and to ensure compliance with all relevant provisions, use only the original accessories. Unauthorized modifications or the use of unapproved accessories may result in damage to the router and/or a breach of applicable regulations. Unauthorized modifications or use of unapproved accessories may void the warranty.
- The router can not be opened.
- Turn off the router and disconnect it from power supply before handling the SIM card.
- **Caution!** This equipment is not suitable for use in locations where children are likely to be present. The SIM card could be swallowed by small children.
- Power supply must not exceed 48 V DC max.
- Do not expose the router to extreme ambient conditions. Protect the router against dust, moisture and high temperature.
- Only routers with appropriate certification and labelling should be used in locations where flammable and explosive materials are present, including gas stations, chemical plants, or locations in which explosives are used. We remind users of the duty to observe the restrictions concerning the utilization of radio devices at such places.
- Switch off the router when travelling by plane. Utilization of the router on a plane may endanger the operation of the plane or interfere with the mobile telephone network, and may be unlawful. Failure to observe these instructions may result in the suspension or cancellation of telephone services for the respective client and/or may result in legal sanctions.
- When using the router in close proximity to personal medical devices, such as cardiac pacemakers or hearing aids, you must proceed with heightened caution.
- The router may cause interference when used in close proximity to TV sets, radio receivers or personal computers.
- It is recommended that you create an appropriate copy or backup of all important settings that are stored in the memory of the device.

Product Disposal Instructions

The WEEE (Waste Electrical and Electronic Equipment: 2012/19/EU) directive was introduced to ensure that electrical/electronic products are recycled using the best available recovery techniques to minimize the environmental impact. This product contains high quality materials and components which can be recycled. At the end of it's life this pro- duct MUST NOT be mixed with other commercial waste for disposal. The device contains a battery. Remove the battery from the device before disposal. The battery in the device needs to be disposed of apart accordingly. Check the terms and conditions of your supplier for disposal information.
